

## Feedback for RRMP Literature Review [Formative]

Tutor completing formative feedback: Karen Outram	Student number: Yash Roongta
Details of any extensions etc:	Submission Attempt: Formative

Thank you for submitting your formative, [noted the formative submission was late, but I agreed via Computing Support to give you feedback].

The subject matter of your intended Literature is fine, I would just advise caution regarding trying to look at too many different facets of the subject you have chosen given that you only have 2,000 words allocated to the summative Literature Review itself. I've copied and pasted the x2 paragraphs below that outline general intentions for research and investigation that you have discussed, as follows:

*'The examination digs further into the various cybersecurity technologies and strategies, including firewalls, Intrusion Detection Systems (IDS), and Intrusion Prevention Systems (IPS). The necessity of encryption for data at rest and in transit is also covered, along with endpoint security measures such as antivirus software, patch management, and device management. The assessment also emphasises the significance of Security Information and Event Management (SIEM) for real-time monitoring and incident response.*

*In addition, the literature analysis highlights the necessity for routine security audits, vulnerability assessments, and penetration testing, as well as staff training and awareness programmes addressing security best practises, social engineering, password management, and physical security. It is essential to build incident response and disaster recovery plans, including business continuity planning and backup techniques, to guarantee the resilience of the transportation system against possible threats'.*

There is a lot of content here, and so you do need to decide specifically what are the key core aspects that you feel will build targeted research for a 2,000 word summative. If you look at too many angles of research in the subject, your research content will be superficial because you are trying to look at too many tangents. Decide on the core part of the topic that you feel is important to research and then focus in on research of specifics. Remember the summative itself has to be a critical discussion regarding research, looking at the pros and cons of research.

Wishing you the best of luck now for your actual summative,

With best wishes

Karen
